

# DOUBLE SIDED TAPE

## POLYPROPYLENE BASED

PP-based double-sided tape is made of polypropylene film with double-sided adhesive layer, covered with a siliconized paper liner. The tape has excellent adhesion to low-energy smooth surfaces and closed-structure cell foams.

### CHARACTERISTICS:

Base material	Vendor code	Size	Quantity pcs/box	Color	Barcode
Polypropylene film	DPP385	38mm*5m	64	Base – transparent, liner – mustard	4824012356551
	DPP3810	38mm*10m	48		4824012356568
	DPP505	50mm*5m	72		4824012356575
	DPP5010	50mm*10m	48		4824012356582
	DPP5025	50mm*25m	36		4824012126352

### ADVANTAGES:

- excellent adhesion with high shear and tear strength;
- high resistance to aging of the adhesive layer;
- UV stability and water resistance;
- protective liner of a high quality retains the properties of the adhesive layer of the tape;
- high contact interaction with various materials (metal, glass, processed wood, laminated cardboard, plastics, including those with low surface energy, painted metals, paper, films);
- reliability of fixation on even and uneven surfaces;
- the possibility of using inside and outside the premises;
- transparency of the tape allows to get the invisibility of the adhesive contour;
- high strength of the tape combined with long-term adhesion and heat resistance;
- speed and ease of use.

### APPLICATION:

- installation of floor coverings;
- production of printed products and advertising media;
- repair and installation work in everyday life;
- design decoration of gifts and interior items;
- complex mounting work;
- fastening of glass parts;
- bonding of thin plastics and foams with a closed porous structure, such as porous polyethylene and rubber;
- self-adhesive processing of boards, panels, strips, profiles, visual communication products on retail shelves in the advertising industry (wobblers, price tags, stoppers, shelf-tokens)
- internal application during pasting of metal, paper and unplasticized PVC.
