

METALLIZED TAPE

CHARACTERISTICS:

Base material	Adhesive layer	Size	Quantity in a box	Color	Packaging	Thickness	Fastening temperature	Operating temperature
Aluminum coated polypropylene tape	acrylic	48mm*25m	72 pcs.	metallic	Colored label on roll, individually shrink-wrapped	45 µm	from +10 to +30°C	from -10 to +80°C

APPLICATION:

The metallized tape from TM Mustang has many unique properties that make it versatile and multifunctional, so the tape is in great demand in various directions: repair and construction, decor, and the automotive industry.

- making crafts and hand made;
- interior decoration, festive outfits and decorations;
- repair and restoration of minor damages and chips on metal, plastic and chrome-plated car parts;
- protection of auto parts from the penetration of dirt, oils, solvents and chemicals;
- temporary protection of surfaces against corrosion;
- protection of connections from steam, dust, dirt and moisture penetration;
- temporary sealing of joints of pipes and air ducts.

ADVANTAGES:

- resistance to UV-radiation;
- moisture resistance;
- resistance to temperature extremes;
- high level of adhesion to metal, chromium and plastics;
- elasticity;
- versatility of application.
