

# PROFINSULATION

HEAT-INSULATING ADHESIVE TAPE

**Heat-insulating adhesive tape PROF INSULATION** is a specialized tape designed for gluing, fixing and banding heat-insulating materials on pipes in water supply, ventilation, heating and sewerage systems. The adhesive layer provides excellent adhesion to foamed polyethylene, rubber and other materials. The elastic PVC base of the tape takes the shape of the surface, providing a snug fit and reliable fixation over the entire surface plane. The tape is used for gluing vertical and horizontal cuts of insulation materials. The gray color of the tape visually matches most of the insulation materials, without spoiling the look of the objects.

## CHARACTERISTICS:

Base material	Adhesive layer	Vendor code	Size	Quantity in a box	Color	Packaging	Barcode
PVC	Synthetic rubber	TIT5030	50mm*30m	12 pcs.	Gray	laminated box with Euro loop	4824025533413

## ADVANTAGES:

- ✓ high adhesion to foamed PE and rubber;
- ✓ durability of the connection;
- ✓ elasticity;
- ✓ manual tear-off;
- ✓ resistance to condensation and temperature changes;
- ✓ internal and external use.

## APPLICATION:

- ✓ gluing, fixing and banding insulation materials;
- ✓ insulation of joints and connections of HVAC systems;
- ✓ repair work;
- ✓ sealing of seams.
